

ABSTRACT OF THE DISCLOSURE

A highway tank made of steel or aluminum for transporting fluids such as diesel and jet fuel to remote sites, and providing the necessary containment features to store the fluids at remote sites. The highway tank comprises an inner and an outer wall with a space providing at least 110% containment. The highway tank may also comprise fuel-forwarding equipment which can include a hose and hose reel, internal or external pump, a fuel meter, a generator and a fuel filter, as well as a drip tray. The highway tank may be top loaded, bottom loaded, or both. The highway tank includes overfill protection and spill control features. The highway tank may be divided into compartments.
